1. Introduction

The **ProfileApp** is a Flutter-based mobile application developed as part of the *Basic Widgets Quiz Assignment*.
The main purpose of this app is to demonstrate the understanding and implementation of **Flutter's basic widgets**, layout management, state handling, and user interactivity.

This app represents a **user profile screen**, allowing users to view their profile image, name, email, and bio, along with functionality to edit their username. The app also validates user input, provides interactive feedback, and adapts to different screen orientations, ensuring a responsive and engaging user experience.
